

Stormwater Quality Improvement Device Evaluation Protocol (SQIDEP)

VERIFICATION CERTIFICATE

Applicant Information

Applicant Name	Atlan Stormwater
Applicant Address	130 Sandstone Place, Parkinson QLD 4115
Phone Number	07 32716960
Email	Andy.Hornbuckle@atlan.com.au
Website	www.atlan.com.au

Verified Technology	FlowFilter
Issue Date	23 August 2024
Reviewed Documents	<p>Atlan Body of Evidence application submission (Prepared by Drapper Environmental Consultants, January 2024)</p> <p>ALS Environmental. (2024). Lab Reports from Sept 2022 to March 2023.</p> <p>Drapper Environmental Consultants. (12 May 2023). Costco - Main Works - StormwaterDetailed Plan, Issue A.</p> <p>Drapper Environmental Consultants. --	--

Technology Information

Applicant's Verified Performance	<p>Treatable flow rate = 4 L/s per filter cartridge</p> <p>This treatable flow rate requires the internal high flow bypass (crest of the internal riser) to be at least 630mm above the top of the cartridges. If this is not achieved in the design, then the treatable flow rate is not appropriate.</p>
---	--

Claims	<table> <tr> <td>Total Suspended Solids (TSS)</td><td>95 %</td></tr> <tr> <td>Total Phosphorus (TP)</td><td>93 %</td></tr> <tr> <td>Total Nitrogen (TN)</td><td>45 %</td></tr> <tr> <td>Lead (Pb)</td><td>90%</td></tr> <tr> <td>Gross Pollutants</td><td>100 %</td></tr> <tr> <td>Zinc</td><td>53 %</td></tr> </table>	Total Suspended Solids (TSS)	95 %	Total Phosphorus (TP)	93 %	Total Nitrogen (TN)	45 %	Lead (Pb)	90%	Gross Pollutants	100 %	Zinc	53 %
Total Suspended Solids (TSS)	95 %												
Total Phosphorus (TP)	93 %												
Total Nitrogen (TN)	45 %												
Lead (Pb)	90%												
Gross Pollutants	100 %												
Zinc	53 %												
Maintenance performed during monitoring	<p>Inspection every 3 months.</p> <p>Vacuum clean of gross pollutants / sediment occurred twice during monitoring period 6 months apart.</p>												
Verified method to model in MUSIC	<p>Modelling of the FlowFilter system in MUSIC should be undertaken as follows:</p> <ol style="list-style-type: none"> 1. Generic Treatment Node or Gross pollutant Trap <ol style="list-style-type: none"> a. Low Flow Bypass = 0 b. High Flow Bypass = $0.004 \text{ m}^3/\text{s} \times \text{number of cartridges}$ (4L/s x number of cartridges) 2. Transfer functions set to achieve the following removal rates: <ol style="list-style-type: none"> a. Flow 0% reduction b. TSS 95% reduction c. TP 93% reduction d. TN 45% reduction e. Gross pollutants 100% reduction 												
Conditions	<p>The limitations of the acceptance of these claims include:</p> <ul style="list-style-type: none"> SQIDEP did not provide gross pollutant monitoring guidance at the time of this assessment. This was discussed with SQIDEP panel and based on previous assessments of similar products a removal of 100% gross pollutants up to the treatable flow rate has been adopted provided the assessors are comfortable that the filter system will effectively capture and hold gross pollutants (greater than 5mm). The assessors were comfortable the filter system will effectively capture and hold gross pollutants up the treatment flows rate so a removal of 100% was adopted. 												

Independent Reviewers	Shaun Leinster Andrew Judge
Accepted by Governance Panel	26 August 2024
Accepted by Stormwater Australia Board	26 August 2024
